

WHAT IS CLAIMED IS:

(1) A cutter comprising a first support member; a second
5 stud reception member which is perpendicularly
attached to the first support member; and a second
handle member which is attached to the first support
member and which includes a pair of severing members.

(2) The cutter of claim 1 which said handle has
10 serpentine shape.

(3) The cutter of claim 1 which said stud reception member
is a telescoping member.

(4) The cutter of claim 1 where said stud reception
member has a thickness which is substantially similar to
15 the thickness of a metal stud member.

(5) A cutter comprising a metal stud reception member; and
a cutting assembly which is deployed proximate to one end
of the stud reception member.

(6) The cutter of claim 5 which said cutting assembly
20 comprised a serpentine handle member; and a pair of cutting
members.

(7) The cutter of claim 6 where each of said pair of
cutting members is substantially identical.

(8) The cutter of claim 5 which said metal stud reception member comprises a telescoping member.

(9) A method for cutting a metal stud comprising the steps of: stationarily positioning said metal stud upon a member; providing a pair of engagement members; and selectively causing said provided pair of engagement members to each said member.

(10) The method of claim 9 which each of said pair of engagement members is substantially similar.

10 (11) The method of claim 9 where member is a telescoping member.
